EDMONTON

Product Information & Data Sheet

Edmonton is a darker castle rock style natural stone veneer. The stone is primarily shades of dark grey with the occasional gold or light brown piece. Edmonton showcases variation from piece to piece that can only be achieved with real stone. This stone veneer is not a blend. All the pieces are extracted from the same quarry where there is wide variation in mineral composition. In contrast to the variation on the individual pieces, the finished project forms a cohesive look. When you take step back to view the wall from a distance the pieces all seem to belong together. This is a premium quality real stone veneer we import from overseas. It is in stock and ready to ship today.
