

BRUNSWICK

Product Information & Data Sheet

Brunswick real stone veneer is a low-medium height ledgestone. The stone has colors ranging from dark blue/grey to rust/orange tones. Brunswick is a natural basalt trap rock quarried deep in the hardwood forests of northern Wisconsin. Trap rock is created by the stacking of successive lava flows which then form a distinct stair step landscape. The cliffs typically associated with trap rock are created by erosion removing the surrounding soil and exposing the resilient stone. Brunswick is not quarried in the traditional sense as the stone is pulled from the wall in large vertical columns.

Flats Dimensions

Heights: 1" - 5"

Lengths: 4" - 12"

Depths: ¾" - 1-½"

Weight: 13 - 15 lb. per square foot

Corner Dimensions

Heights: 1" - 5"

Lengths: 3"-5" x 6"-12"

Depths: ¾" - 1-½"

Weight: 20 lb. per linear foot

Angle: 90

Stone Characteristics

Colors: Earthy Browns, Grey Tones, Sky Tones

Style: Ledgestone

Finish: Natural

Packaging

Sold as loose pieces.

Flat Pallet: 150 square feet

Corner Pallet: 50 linear feet

Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.

LEED® Certification & Energy Efficiency

Using natural stone veneer can contribute to obtaining credits toward your LEED green building certification. The natural material helps improve the energy efficiency of your home or business.

Installation

Natural thin stone veneer installation information is available on our website:
