

# HAMMERSMITH

## Product Information & Data Sheet

Hammersmith is a bold black natural thin stone veneer. The name comes from the hand pitching or rock facing finish of the stone. Hand pitching is done with a chisel and creates the unique wavy texture of the finished stone. This labor-intensive process is also called hand dressing in the stone industry. The quarry that produces Hammersmith has consistent layers which dictate the heights of the pieces of the stone. Due to the heights of the stone, Hammersmith must be installed in a running bond or course height pattern as opposed to a 2:1 ashlar pattern. Hammersmith is a premium natural sandstone we import from overseas. The stone is in our warehouse and ready to ship.

### Flats Dimensions

Heights: 2" - 8"  
Lengths: 4" - 18"  
Depths: ¾" - 1½"  
Weight: 13 - 15 lb. per square foot

### Corner Dimensions

Heights: 2" - 8"  
Lengths: 3"-5" x 8"-12"  
Depths: ¾" - 1-½"  
Weight: 20 lb. per linear foot  
Angle: 90

### Stone Characteristics

Colors: Grey Tones  
Style: Ashlar  
Finish: Natural

### Packaging

Sold as loose pieces.  
Flat Pallet: 150 square feet  
Corner Pallet: 50 linear feet

### Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.
