

BISCAYNE

Product Information & Data Sheet

Biscayne is a classic grey castle rock thin veneer with a tumbled finish. The stone is predominantly grey and has some soft hints of tans and light browns.

The raw stone used to create Biscayne is extracted from some of the deepest areas of the quarry. In most quarries, the deeper you go, the less color there is in the stone. This neutral color comes from a lack of mineral penetration from the rainwater. Occasionally, the minerals make it down through natural cracks or fissures in the stone, giving a small percentage of pieces some soft hints of color.

Flats Dimensions

Heights: 2" - 12"
Lengths: 4" - 18"
Depths: ¾" - 1-½"
Weight: 13 - 15 lb. per square foot

Stone Characteristics

Colors: Grey Tones
Style: Castle Rock
Finish: Tumbled

Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.
