

SANTA CLARA

Product Information & Data Sheet

Santa Clara is a natural blend of split face stone in an ashlar pattern. The stone is referred to as a natural blend because it has two distinct colors, but Santa Clara is compositionally the same stone. The veneer consists of semi-consistent greys and tans in a full range of sizes. Occasionally, the tans can have a beautiful pinkish hue. Santa Clara is unique in that the two distinct colors both come from the same quarry. The tan pieces are extracted from the upper or shallow parts of the quarry, whereas, the neutral greys are pulled from the deeper areas. The stone formed in different stages over time. At each stage, there were different minerals present which led to the creation of different color stones in the same quarry.

Flats Dimensions

Heights: 2" - 8"
Lengths: 4" - 18"
Depths: ¾" - 1½"
Weight: 13 - 15 lb. per square foot

Corner Dimensions

Heights: 2" - 8"
Lengths: 3"-5" x 8"-12"
Depths: ¾" - 1-½"
Weight: 20 lb. per linear foot
Angle: 90

Stone Characteristics

Colors: Copper Tones, Grey Tones
Style: Ashlar
Finish: Natural

Packaging

Sold as loose pieces.
Flat Pallet: 150 square feet
Corner Pallet: 50 linear feet

Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.
