

FISH CREEK

Product Information & Data Sheet

Fish Creek is an ashlar style granite gneiss thin stone veneer. The stone appears grey from a distance but upon closer inspection it shows an incredible amount of horizontal veining. The depth of color and variation that cannot be replicated is what sets real stone apart from man-made imitations. Fish creek is an ashlar style stone consisting of medium size linear pieces. The stone is suitable for all applications and can be installed with or without a mortar joint. If drystacking is desired, the installation cost will be substantially higher. This is a premium quality thin stone we import from overseas. It is in stock and ready to ship.

Flats Dimensions

Heights: 2" - 8"
Lengths: 4" - 18"
Depths: ¾" - 1½"
Weight: 13 - 15 lb. per square foot

Stone Characteristics

Colors: Grey Tones
Style: Ashlar
Finish: Natural

Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.

Natural stone varies in color, shape and veining from piece to piece. Photos used are meant to be as accurate as possible in depicting the product. Photos of stone are meant to give a general idea but should not be used for exact color matching.

LEED® Certification & Energy Efficiency

Using natural stone veneer can contribute to obtaining credits toward your LEED green building certification. The natural material helps improve the energy efficiency of your home or business.

Installation

Natural thin stone veneer installation information is available on our website:
