

# PEWTER LEDGE

## Product Information & Data Sheet

Pewter Ledge is a natural thin cut sandstone veneer. The stone showcases the interior part of the natural sandstone slabs exposed by breaking or splitting them with a large hydraulic press. Pewter Ledge has a light rock face or hand-pitched finish. The rock face is done using a chisel and makes the stone very lightly bow out. This process adds depth of texture and unique character to the pieces of stone. The mockup photo has what looks like little waves in the stone; this texture the rock face or chiseling. The heights of Pewter Ledge are not cut but come from the natural layers of the quarry. Due to the naturally semi-uniform heights, Pewter Ledge is typically installed in a course height or running bond pattern. Pewter Ledge is an imported stone that we have in stock and ready to ship.

This product has limited availability. Please call for available quantity before placing an order.

### Flats Dimensions

Heights: 1" - 5"  
Lengths: 4" - 12"  
Depths: ¾" - 1-½"  
Weight: 13 - 15 lb. per square foot

### Corner Dimensions

Heights: 1" - 5"  
Lengths: 3"-5" x 6"-12"  
Depths: ¾" - 1-½"  
Weight: 20 lb. per linear foot  
Angle: 90

### Stone Characteristics

Colors: Grey Tones  
Style: Ledgestone  
Finish: Natural

### Packaging

Sold as loose pieces.  
Flat Pallet: 150 square feet  
Corner Pallet: 50 linear feet

### Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.
