

# SMOKEY GOLD

## Product Information & Data Sheet

Smokey Gold real stone veneer is a natural low height ledgerstone. The stone itself is a natural quartzite and the thin veneer is cut from the edges of the sheets of stone as they are quarried. The process of sawing the raw stone into natural thin veneer turns the diamond blade bright red due to heat that is generated and the density of the natural quartzite. Smokey gold is predominantly gold but also showcases some grey and white pieces giving it a subtle range of color. The textures are mainly smooth with some rippling. Although all of our natural stone veneers are high density, low water absorption, and approved for use in all climates, Smokey Gold is exceptionally hard and sturdy.

### Flats Dimensions

Heights: 1" - 5"  
Lengths: 4" - 12"  
Depths: ¾" - 1-½"  
Weight: 13 - 15 lb. per square foot

### Corner Dimensions

Heights: 1" - 5"  
Lengths: 3"-5" x 6"-12"  
Depths: ¾" - 1-½"  
Weight: 20 lb. per linear foot  
Angle: 90

### Stone Characteristics

Colors: Gold Tones  
Style: Ledgerstone  
Finish: Natural

### Packaging

Sold as loose pieces.  
Flat Pallet: 150 square feet  
Corner Pallet: 50 linear feet

### Applications

This natural stone veneer is approved for all applications due to its high compressive strength and low water absorption. It is well suited for exterior applications with a harsh climate.
